

AXA-DYN/DMX

Dynet to 24 Channel DMX transmitter.

The AXA-DYN/DMX enables devices on a Dynalite network to control up to 24 channels of DMX on a single DMX network. Multiple DMX networks of up to 24 channels each can be used with an AXA-DYN/DMX on each network.

DMX Connections

The DMX channel numbers are fixed from 1-24 but the corresponding control channels can be set to any area and channel number. 30 presets are available in each area which can be individually selected to simplify preset editing. The device is controlled via preset and channel messages and can report current preset and channel level status. Presets can be adjusted in real time and can also be modified without software by adjusting individual channel and sending a 'save current preset' message.
