

## AXA-HME1

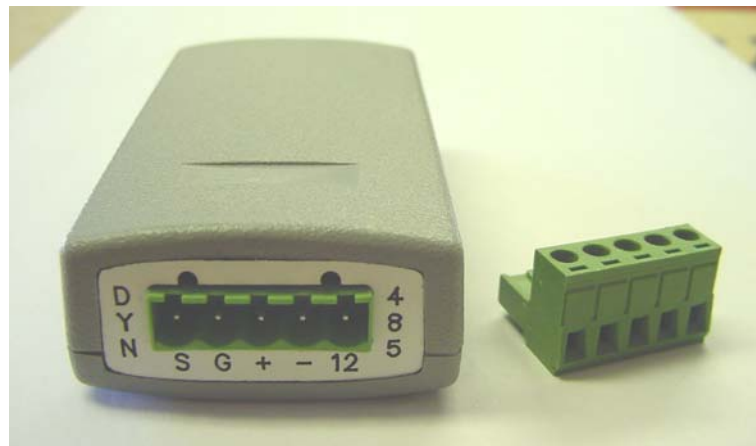

### 2 Source x 1 Zone stereo pre-amp

The AXA-HME1 enables devices on a Dynalite network to control source selections between two audio components and control Volume, Bass and Treble to one zone of amplification. Due to its compact size the AXA-HME1 uses stereo 3.5mm sockets for audio inputs and outputs. The unit can be powered from the Dynet bus and draws less than 15mA however it is not recommended as the network supply is generally too noisy and can result in possible audio hums. Any regulated 12 Volt DC power supply is suitable.

Audio Connections

Dynet RS485 Connections

### TYPICAL APPLICATION

#### Audio distribution to 1 zone controlled via Dynalite network
