## Control the Gold Coast Exhibition Centre...

*Dynalite control all the internal and external lighting throughout the Gold Coast Convention Centre. What makes this project unique is that in conjunction with AXA Design Dynalite also control audio sources in the Function Rooms, Great Hall, Meeting and Conference Facilities.*

*By simply assigning Dynalite preset buttons the keypads distributed throughout the Convention Centre control the audio and lighting systems via the one Cat5 STP cable. Four AXA-CMB64's were added to the Dynalite system for this exact purpose. The CMB64 was also chosen because of its ability to listen to the Dynalite system and follow the complex room joining functions and automatically link the source selection and volume control as room configurations changed.*

another AXA design

### AXA-CMB64

- 6 stereo balanced inputs
- 4 stereo balanced outputs
- Source selection
- Volume, Bass & Treble
- Bi-direction audio zone linking
- All controlled via RS485 (Dynalite/Dynet compatible)
